Package default Procedural Elements

DataGridXML.class.php

- **Package** default

`require_once 'Serializer.php'` [*line 12*]

uses Serializer.php to structure Data in XML format.

Package default Classes

Class DataGridXML

[line 21]

Supplies the data to a DataGrid in XML.

- **Package** default
- **Version** \$LastChangedRevision\$
- **Author** Eni Kao, Para Phil

DataGridXML::UNDEFINED_COLUMNS

= 4712 [line 31]

Exception Code if getXML called with undefined columns.

DataGridXML::XML_SERIALIZER_EXCEPTION

= 4711 [line 26]

Exception Code if the serializer returns an error.

Constructor function DataGridXML::__construct(0, 1) [line 60]

Function Parameters:

- **\$columns 0** array the columns to initialize the Object with
- **\$rows 1** array the rows of the Object

Initializes serializer and sets initial column and row data if given.

void function DataGridXML::addRows(\$rows) [line 144]

Function Parameters:

- **\$rows** **\$rows** array array of array of cell data

Adds a row.

Although works if no data has been given yet.

- **Access** public

void function DataGridXML::emptyRows() [line 161]

All rows will be erased.

- **Access** public

string function DataGridXML::getXML() [line 170]

Returns the XML structure.

- **Access** public

void function DataGridXML::setColumns(\$columns) [line 118]

Function Parameters:

- *\$columns* **\$columns** array array of strings of cloumn names

Sets the column head.

- **Access** public

void function DataGridXML::setData(\$columns, \$rows) [line 107]

Function Parameters:

- *\$columns* **\$columns** array array of strings of cloumn names
- *\$rows* **\$rows** array array of array of cell data

Sets the column head and row data.

- **Access** public

void function DataGridXML::setRows(\$rows) [line 130]

Function Parameters:

- *\$rows* **\$rows** array array of array of cell data

Sets the rows.

- **Access** public
